Market Analysis Best Practices:

Using Submarkets for Search & Analysis

As builders and developers try to compete in the complex, fast paced world of real estate, they're finding that the terms and conditions for underwriting land are tightening, while competition for "A" land in "A" markets is fierce. To keep pace, firms need to have a fast and efficient due diligence process and possess superior market knowledge. The introduction of new technologies and analysis techniques is making it more feasible than ever for companies to fuel their due diligence process and gain superior knowledge. One of the best ways to stay on top of market dynamics is by using mapping tools to conduct submarket searches and analysis.

While the availability of online mapping applications has grown, few products offer the robust features found in Digital Map Products' LandVision™. LandVision™, a real estate research, analysis and collaboration tool, helps you leverage spatial technology to capitalize on development opportunities. The following best practice article will walk you through how you can take advantage of the resources and tools available in LandVision™ to map residential development submarkets and analyze sales and competitor activity to achieve actionable industry information.

Overview: Residential Suburban Developments

The examples used in this article focus on mid-market suburban residential developments in the Temecula / Murrieta area of Riverside County, California. Using LandVision™ you will learn how to map and analyze submarkets, search for targeted sales comparables and track competitor submarket activity. Submarkets will be analyzed based on their product mix, sales activity, median price, level of competition, and estimated future demand.

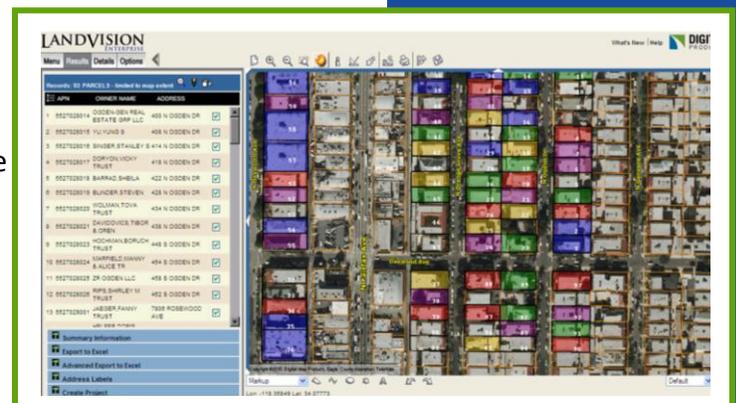

Best Practice: Submarket Definition

There are numerous ways to stay abreast of market trends and changes, from simply keeping personal notes and a contact list to investing in a database management program. However, no method is as powerful as it could be without targeted analysis facilitated by mapping and a spatial perspective.

The first step to achieve more robust market insights is to break your market into smaller, more homogeneous segments called submarkets. The goal of creating submarkets is to identify areas unique to your business, with similar traits, to perform searches, run analysis, and track trends. LandVision™ offers numerous tools to help you map your data and establish submarkets for deeper analysis.

Features of LandVision™

- ✓ Parcel Boundaries
- ✓ Street Centerlines
- ✓ City Boundaries
- ✓ Aerial Imagery
- ✓ Tax Assessor Information
 - Ownership
 - Owner Address
 - Site features
 - Tax and Value
- ✓ Markup Polygon
- ✓ Projects
- ✓ Enhanced Search
- ✓ Limit search "to Selected Graphics"
- ✓ Export to Excel
- ✓ Save Map

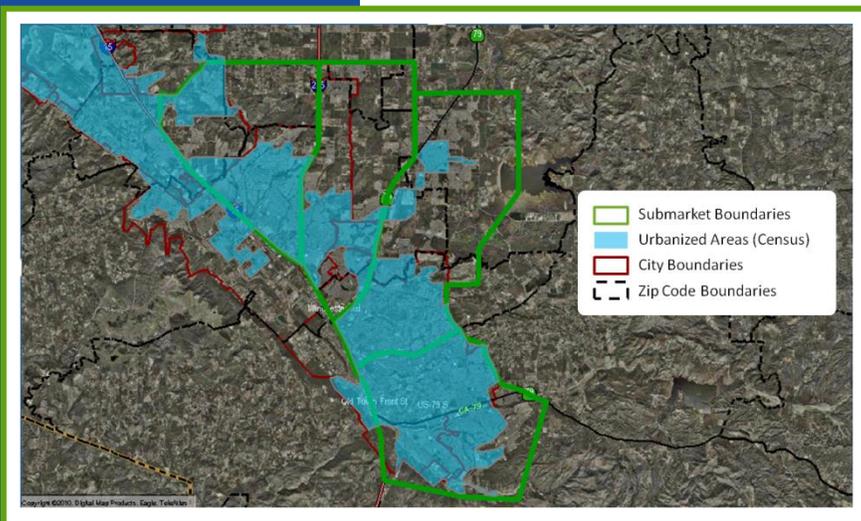

LandVision™ provides a complete solution to research, analyze and collaborate effectively to make better real estate decisions.

Digital Map Products

Spatial Technology Made Easy

Using the markup tool available in LandVision™ you can easily establish submarkets to help you track sales activity in comparable geographies, identify major players, map communities, spot trends and even locate lots and land for acquisition. To map your submarkets using LandVision™ simply zoom to a scale where you can see the entire area of interest within your map, select the Draw Polygon tool located below the map, move your mouse into the map and draw a polygon around the perimeter of the submarket. Submarkets frequently follow manmade and natural boundaries. Some factors to consider when creating your submarkets are: socioeconomic boundaries, physical boundaries (foothills, canyons, water), jurisdictional boundaries (cities, zip codes, counties), transportation corridors, neighborhood designations and your organizations' proprietary designations.

The image below shows an example of residential development submarkets plotted using this method. The free-hand nature of the markup tool lets you make your own determination about what constitutes a submarket for your business.

The markup tools let you easily draw in submarket boundaries to track sales activity in comparable geographies, identify major players, track trends, and organize your research in a very intuitive way.

The drawn boundaries (green lines) in the image to the left represent 4 submarkets identified in the Temecula / Murrieta region of Riverside County, California. For comparison, also shown on the map are US Census 2008 Urbanized Areas (blue shading) representing population density areas, city boundaries (burgundy lines) and zip code boundaries (black dashed lines).

Once you have established your submarket boundaries, you should save them for future use. Do this by using the Save Drawing feature located on the main toolbar. You can even share your work with colleagues for quick and easy collaboration by saving your map to either the group folder or account folder.

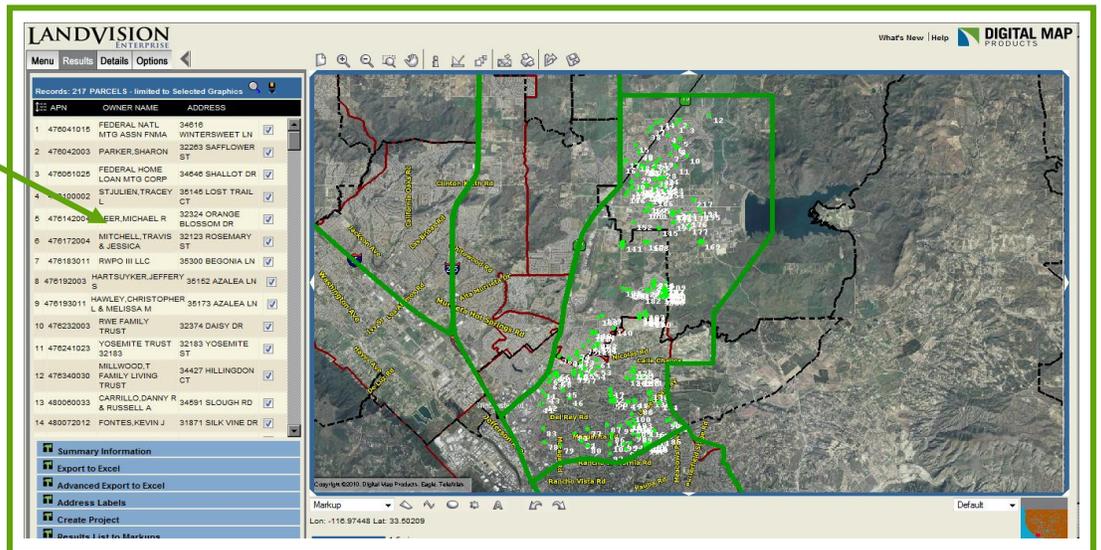

Another way to map your submarkets is by using the Projects feature. The advantage of the Projects feature is that you can append key information directly to each submarket drawing by inputting this information into the custom fields on the Projects form. The ability to record attribute information lets you create your own proprietary spatial database which is searchable. To create a submarket using the Projects layer, change the dropdown menu below the map next to the Draw Polygon tool from the default value "Markup" to "Projects", then follow the same steps outlined above to create a polygon except this time also input text into the form located to the left of the map. Once you have completed the form, click the Save button located below the form.

Digital Map Products

Spatial Technology Made Easy

Best Practice: Submarket Searches

Once you've created and saved your submarkets, it is time to put them to use by conducting comparable searches to track and analyze sales activity of new and existing homes by site characteristics such as land use and property size. To do this, use the Enhanced Search form and input your search parameters such as last sale date, land use type, estimated market value, building size and/or lot size. To spatially constrain your search to only your submarket boundary, check the 'To Selected Graphics' check box at the bottom of the search form. The image below shows one of our submarket boundaries, with a multi-criteria comparables search applied to it. From the results list, found to the left of the image, you can easily identify owners to see who the active players are and you can also click on each result individually to get a more comprehensive view of comparable properties that have transacted in the submarket.

The screenshot displays the LandVision software interface. On the left, a 'Results List' table shows 14 property records with columns for APN, Owner Name, and Address. A green box highlights the 'Results List' label, with a green arrow pointing to the table. The table contains the following data:

APN	OWNER NAME	ADDRESS
1 470541015	FEDERAL NATL MTO ASSN FNMA	34516 WINTERSWEET LN 32263 SAFFLOWER ST
2 470542003	PARKER, SHARON	
3 470561028	FEDERAL HOME LOAN MTO CORP	35456 SHALLOT DR
4 471000002	ST JULIEN, TRACEY L	35145 LOST TRAIL CT
5 471142005	MEER, MICHAEL R	32324 ORANGE BLOSSOM DR
6 471722004	MITCHELL, TRAVIS & JESSICA	32123 ROSEMARY ST
7 47183011	RWPO III LLC	35300 BEGONA LN
8 47192003	HARTSUYKER, JEFFERY S	35152 AZALEA LN
9 47193011	HAWLEY, CHRISTOPHER L & MELISSA M	35173 AZALEA LN
10 47232003	RWE FAMILY TRUST	32374 DAISY DR
11 47241023	YOSEMITE TRUST	32183 YOSEMITE ST
12 47534030	HILLWOOD, T FAMILY LIVING TRUST	34427 HILLINGDON CT
13 48000033	CARRILLO, DANNY R & RUSSELL A	34591 SLOUGH RD
14 480072012	FONTES, KEVIN J	31871 SILK VINE DR

On the right, a map shows a submarket boundary outlined in green over an aerial view of a residential area. The map includes various street names and a legend at the bottom.

With the Enhanced Search form, you can run detailed comparable searches by a variety of property and location criteria. Shown above is an individual submarket search with the criteria of: sale date of Q3 2010, land use equals SFR, and home size 1800 to 2800 sq ft.

Generating a new results list based on different search criteria is simple and can be done at any time. Having already saved your submarkets you can easily run additional searches employing new criteria based on your needs. For example, you can run quarterly submarket sales searches by setting a date range to the most recent quarter. You can also use your submarkets to search for distressed and bank-owned properties, locate vacant lots and land, or even identify competing communities.

Detailed searches such as these will arm you with key information on the dynamics of a particular area of interest. By applying submarket analysis to your search results you can determine market health, whether the market can support additional development, the optimal product mix, and even pricing.

Did You Know?

Using LandVision™ you can input specific search parameters such as sale date, land use, market value and more.

Best Practice: Submarket Analysis

Generating property lists using the above methods is just the start of the submarket analysis techniques available in LandVision™. With your search results displayed on the map, perform a high level visual analysis and observe where recent sales are clustering, particularly with respect to known actively selling communities. Then, to deepen your analysis use the Export to Excel feature located at the bottom of the results list to work with your sales data in a spreadsheet. The export file will contain over 50 attributes based on Tax Assessor data that can be analyzed to determine summary metrics such as median and average sale price, house size, price/sqft, and more. You can also identify trends on number of homes selling per month and even distinguish between new and existing home sales by sorting on seller name.

							MARKET SUMMARY STATISTICS			
							Median Sale Price	\$249,500		
							Average Sale Price	\$264,039		
							Median Living Sqft	2267		
							Average Living Sqft	2276		
							Median Price Per Sqft	\$109.95		
							Average Price Per Sqft	\$117.23		
							Month	No. of Sales	Median Price	
							July	66	\$250,000	
							August	70	\$248,000	
							September	76	\$245,000	

Exploring seller name, you can gain a big picture view of market activity and tell what's selling and by whom: builders, private sellers, banks, etc. You can calculate additional fields such as sale price/sqft, and sort and filter your data to highlight trends.

With the Export to Excel feature you can quickly extract your results to a spreadsheet for formatting and analysis.

Did You Know?

Supplementing search results with additional attributes allows for greater analysis.

The image above shows a simple spreadsheet containing all market transactions from Q3 2010 within the submarket boundaries we outlined earlier. Additional metrics showing average and median sale price, house size, and price per square foot shed light on market statistics and trends. Sales volume per month can be an indicator of market health and local demand.

Once you've determined which attributes you use most frequently, you can use the Advanced Export to Excel feature to extract data utilizing just those attributes. This will allow you to zero in on only the necessary information for each situation. The knowledge gained from conducting this analysis can ultimately be reapplied to new searches with the promise of better results due to a deeper understanding of the data.

Exporting search results lists from LandVision™ provides a wealth of information that can easily serve as a starting point for in-depth analysis. Additional analysis possible with submarkets identified and mapped is analyzing residential land use patterns and mapping existing and proposed communities.

Digital Map Products

Spatial Technology Made Easy

Track nearby communities, including their stage of development, price point, sales pace, and remaining inventory.

The map to the left shows several competing communities in a given submarket, with a possible development in red in the lower right corner, sold out developments in blue, and developments currently under construction and selling in green. With this exceptionally detailed submarket view, you can perform advanced sales analysis and even conduct lot inventory analysis by community. Data such as population projections, proposed retail developments, or transportation corridor expansions can help you project future demand and act early on opportunities to get the best land at the best prices.

Best of all, with LandVision™ your custom submarkets and communities are easily saved for subsequent use by yourself and colleagues, allowing you to build a proprietary database of market knowledge and giving you a competitive advantage.

Summary

One of the best ways for builders and developers to stay current on market dynamics is by creating submarkets unique to their area of focus and to use those submarkets for targeted search and analysis efforts. Submarket specificity, coupled with the latest innovations in mapping tools, enable you to better understand your market and its various drivers of change, giving you a competitive edge. The many features available in LandVision™ help you track activity, analyze your territory at a submarket level and drill down for a more strategic approach. Confidently manage your real estate research and analysis for improved decision making with LandVision™.

Digital Map Products' Best Practice Series

"LandVision™ Best Practice Article: Market Analysis Best Practice: Using Submarkets for Search & Analysis" is part of Digital Map Products' Best Practices Series, a collection of articles intended to share industry insight, increase product knowledge and help readers benefit from advances in mapping technology.

About LandVision™ and Digital Map Products

LandVision™ is a real estate research, analysis and collaboration tool that embeds powerful mapping technology so builders, developers, and commercial brokers can make location-aware decisions. It facilitates the identification, qualification, acquisition and ongoing management of land and commercial real estate opportunities. With LandVision™, companies of all sizes can take advantage of spatial technology to make more informed decisions and gain competitive advantage. Digital Map Products is a leading innovator of cloud-based spatial solutions that bring the power of mapping technology to business, government, and consumers. The company's mission is Spatial Technology Made Easy.
